Loxford, Plain Steel

Boasting strong lines and functional beauty, Loxford Wovenpanel® is a brilliant addition to industrial-style spaces and beyond. With a square mesh pattern, thin rounded weave, and open fill, the wide spacing allows light to pass through, creating a sophisticated layer of depth and style. The raw steel allows for unlimited colour finishes, making Loxford a versatile choice for residential and commercial projects alike.

Harness the raw power of unfinished steel and bring your vision to life. Is there a specific colour of wire mesh that would transform your space? Unfinished steel Wovenpanel® is ready for your creative input.

With a generous sheet size of 2400 x 1000mm, this new decorative surface is ideal for medium to large projects and commercial spaces. Since the wire mesh features uncoated and unlacquered mild steel, the surface needs to be finished by powder coating or plating before installation. Not only will this prevent rusting, but it offers endless opportunities for customisation. Whether you want to match the colour palette, or create contrast, the design flexibility of plain steel wire mesh makes seamless integration a snap.
